

SINCE 1925

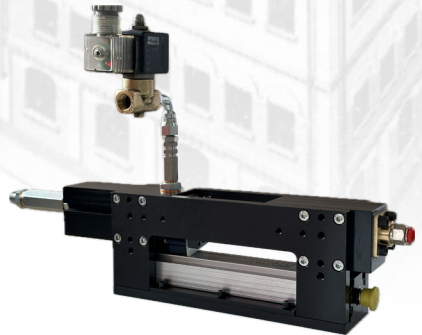

## Ultimate Generation CR Test Stand

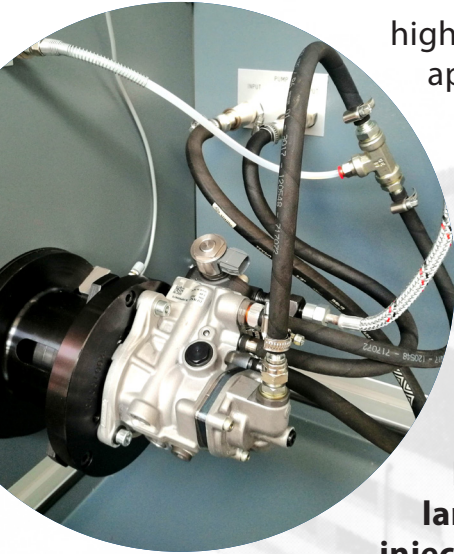

**Rabotti reaches its hundredth anniversary in a new guise!**

CRS200 represents the latest generation of Rabotti stand for the Diesel workshops which still want to be at top level. The stand is the result of the long experience matured by Rabotti staff over the years and is proposed with a more modern, flexible and lightweight structure.

CRS200 is equipped with Rabotti measurement cylinder, a well-established injected volume measurement system which is already

SINCE 1925

highly widespread in the market and really appreciated by customers thanks to its accuracy and reliability.

In addition to the standard functionalities of Rabotti CR stands (such as the testing of automotive and heavy-duty injectors and pumps), the CRS200 stand includes new capabilities, in particular the testing of **synchronized**

**CR pump** (Denso HP5 and more),

**large engines**

**injectors** (such as L'O-

range) and a **new "Pay as**

**you go" strategy to manage coding** which is aimed at improving the cost effectiveness of the stand and adapt it to each workshop reality.
